

MOST INTELLIGENT DOMESTIC DEVICE

Hypertouch surface by Iris Ceramica Group

Iris Ceramica Group developed Hypertouch to give the smart home a more seamless aesthetic. A capacitive switching system, it's limited only by the imagination of the designer and can be integrated into any of the Italian ceramic specialist's huge variety of material finishes. The end result is a completely smooth control surface that's indistinguishable from its surroundings, allowing the operation of lighting, heating, cooling, and audio-visual equipment to be almost invisible.
